Prepared for a 2–5 minute recording with the learner's real voice.

Recording script

Read only the English text below. Green bold expressions show the required modal structures and opinion phrases; do not say the headings aloud.

1 · Introduction

Hello. My name is [LEARNER NAME]. My identification number is [DOCUMENT ID], and my SENA training-group number is [TRAINING GROUP]. My instructor is [INSTRUCTOR]. I am a Software Analysis and Development student at SENA. This recording is for the activity Audio GA3-240202501-AA1-EV02. Today, I am going to talk about my academic and work responsibilities, good attitudes, and solutions to common problems.

2 · Academic responsibilities

In my academic life, I **have to** attend classes on time and complete activities before the deadline. I **must** read the instructions carefully because this helps me avoid mistakes. I also **have to** ask questions when I do not understand a topic. I **believe** students **should** practice English and **should** share useful ideas. **In my opinion**, a responsible student **must** respect other people's work and **must not** copy assignments.

3 · Workplace responsibilities

In software development, teamwork is very important. Every team member **has to** communicate clearly and report progress. We **must** protect users' information and use strong passwords. We **should** write simple, organized code and test the program before delivery. A developer also **has to** document important changes so the team can understand the project.

4 · Solution to a missed deadline

Sometimes a teammate misses a deadline. First, we **should** talk calmly and ask about the problem. Then, we **should** divide the work into small tasks and agree on a realistic plan. We **must not** insult or blame anyone. I **think** respect and empathy are necessary because people work better when they feel supported.

5 · Solution to an application error

Another common problem is an error in the application. The team **has to** reproduce the error, check the code, and test possible solutions. We **should** listen to different opinions before making a decision. However, we **must** choose a safe solution and explain it to the client. If we need more time, we **have to** be honest and give a new delivery date.

6 · Attitudes and beliefs

Good workplace attitudes include being punctual, patient, helpful, and open to feedback. I **believe** a good developer **should** continue learning because technology changes quickly. We **must** follow company rules, but we **should** also suggest improvements respectfully.

7 · Conclusion

To conclude, students and workers **have to** be responsible for their tasks. We **must** act ethically, communicate clearly, and protect information. We **should** support our team and look for practical solutions. These habits can create a positive academic and work environment. Thank you for listening.

Final recording checklist

- Say the personal introduction slowly and keep a short pause between sections.
- Stress have to, must and should without adding -ing after them.
- Use calm falling intonation, then listen and confirm a duration of two to five minutes.
- If a link is submitted, test it in a private browser window before delivery.
